ABOUT ME

I'm a goal-orientated software engineer with a passion for building meaningful tech. I have hands-on experience with various web frameworks and in optimizing backend operations within a microservices architecture. I'm eager to find **software engineering roles** where I can further contribute my skills, and drive innovative solutions, while continuously learning and growing as a developer.

EDUCATION

University of Texas, Dallas

B.S Software Engineering, Academic Excellence Scholarship

Richardson, TX

Aug. 2019 – May. 2023

Relevant Coursework: Operating Systems, Software Architecture and Design, Database Systems, Data Structure and Algorithm, UNIX Environment Software Testing

EXPERIENCE

Software Engineer

July 2023 – present

Veryable Inc

- Creating and implementing Redis-Streaming service, enhancing the back-end system's capabilities for batch processing and improving its efficiency in handling 80,000+ events for a single operation, resulting in a 5x performance improvement.
- Leveraged Redis to implement distributed semaphores, effectively eradicating backend concurrency challenges.
- Led backend team to design and implement Auto Acceptances Microservices, facilitated seamless automation for business clients. Achieved 20% increase in fulfillment rates, with 80% adoption across the entire platform.
- Designed and implemented Notifications Ecosystem, managing diverse notification types and seamlessly delivering over 5 million notifications daily to users.

Computer Lab Technician

May 2022 – May 2023

UTD OIT Computer Labs

- Led efficient operation and maintenance of computer labs, offering customer support to students and faculty.
- Collaborated in scaling the Student Loaner Program, ensuring the smooth distribution of devices to address a significant increase in student demand.
- Optimized and oversaw the efficient resolution of technical support tickets, providing assistance and troubleshooting software issues across various platforms (Windows, Mac, etc.).

Programming Teaching Assistant

December 2021 – May 2022

HVCG Software

- Led 100+ people introductory courses on Programming with Scratch and Web Development with HTML, CSS5, and JavaScript.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, SQL

Frameworks: ReactJs/NextJs, Tailwind CSS, Material UI, Bootstrap, NodeJs/Express, NestJs, Hasura, GraphQL/Apollo, MySQL, PostgreSQL

Infrastructure: Docker, Microsoft Azure, Kubernetes, AWS RDS

Tools: StorybookJS, Highcharts, Figma, Prisma, New Relic, Kanbanize, Jira

PROJECTS

CulinaryVerse

- A full-stack web application allowing users to add, create, and manage cooking recipes, using front-end TypeScript, TailwindCSS, NextJS, back-end Express/NodeJs.
- Incorporated Prisma ORM with PostgreSQL to generate database schema with type-safety and auto-migration, streamlining database management.
- Utilized OpenAI API features to display recommended recipes to users based on their preferences and recipe collections.

StorybookJS Master Component Library

- Designed and built a two-directional UX Master Component Library using TypeScript, Material UI, ReactJS, and StorybookJS.
- Implemented and deployed Front-end web applications using the reusable components in the Master Component Library.

ORGANIZATIONS

The Association for Computing Machinery | *Member*

Greenstand | *Software Engineer*

August 2019 - August 2021

October 2023 - present
