EDUCATION

University of Texas, Dallas

Richardson, TX

B.S Software Engineering, Academic Excellence Scholarship

Aug. 2019 – May. 2023

Relevant Coursework: Artificial Intelligence, Machine Learning, Digital Logic and Computer Design, Operating Systems, Software Architecture and Design, Database Systems, Data Structure and Algorithm, UNIX Environment, Software Testing, Software Requirements

EXPERIENCE

Software Engineer

October 2023 – present

Greenstand

- Oversee the rewrite and migration of the Treetracker project's back-end, shifting from JavaScript NodeJs to a more organized TypeScript NestJs implementation.

Software Engineering Intern

July 2023 – October 2023

Workforce Management Team - Veryable Inc

- Led the development and system design for the Terms of Condition Feature using backend Hasura and GraphQL.
- Collaborated on creating and implementing Redis-Streaming service POC, enhancing the back-end system's capabilities for batch processing and improving its efficiency in handling 80,000+ events for a single operation, resulting in a 5x performance improvement.
- Leveraged Redis to implement distributed semaphores, effectively eradicating backend concurrency challenges.

Computer Lab Technician

May 2022 – May 2023

UTD OIT Computer Labs

- Managed and maintained computer labs operations, provided customer service to students and faculty.
- Assisted students with equipment usage, overseeing the Student Loaner Program.
- Provided technical support, troubleshooting software issues.

Programming Teaching Assistant

December 2021 – May 2022

HVCG Software

- Led 100+ people introductory courses on Programming with Scratch and Web Development with HTML, CSS5, and JavaScript.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, SQL

Frameworks: ReactJs/NextJs, Tailwind CSS, Material UI, Bootstrap, NodeJs/Express, NestJs, Hasura, GraphQL/Apollo, MySQL, PostgreSQL

Infrastructure: Docker, Microsoft Azure, Kubernetes, AWS RDS

Tools: StorybookJS, Highcharts, Figma, Prisma, New Relic, Kanbanize, Jira

PROJECTS

CulinaryVerse

- A full-stack web application allowing users to add, create, and manage cooking recipes, using front-end TypeScript, TailwindCSS, NextJS, back-end Express/NodeJs.
- Incorporated Prisma ORM with PostgreSQL to generate database schema with type-safety and auto-migration, streamlining database management.
- Utilized OpenAI API features to display recommended recipes to users based on their preferences and recipe collections.

OpenAI API

- Built a front-end application that sends user's prompts to OpenAI API and displays the generated responses using JavaScript, Material UI, and Axios.
- Utilized Chrome's Local Storage to save users' prompts and responses, enabling users to view their previous prompts and responses even after reloading the page.
- Display recommended prompts to users, allowing them to quickly send prompts using OpenAI API suggestion features.
